DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-2 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 -2 of copending Application No. 11/514,132 (Pub No: US 2007/0023678 A1). Although the claims are not totally identical, they are not patentably distinct from each other and carry the same meaning.

3. The subject matter claimed in the instant application (Pub No: US 2006/0208741 A1) is disclosed in the copending Application cited above, and both claim common subject matter: Both applications disclose method and apparatus for ionizing biological molecules, such as protein molecules. Both use massive cluster ions of a water/methanol mixture (to which acetic acid or ammonia, etc., has been added) (in the vicinity of dry ice - acetone temperature) generated in a charged-droplet generating chamber by a cold electrospray, and accelerate ions in an evacuated acceleration

chamber by a high-voltage electric field on the order of 10 KV, bombarding a biological sample thin film, which has been applied to a cooled specimen substrate, thereby achieving ionization of large biomolecules. It is to be noted that even the Abstracts of both the applications are identical. Furthermore, independent claims 1 and 2 of the instant application read on independent claims 1 and 2 of the cited copending application, respectively.

This is a provisional obviousness-type double patenting rejection because the above-mentioned claims have not, in fact, been patented.
